TipCalculatorController — JavaFX

```
import javafx.fxml.FXML;
import javafx.scene.control.Label;
import javafx.scene.control.TextField;

public class TipCalculatorController {
    @FXML
    private TextField billAmountField;

    @FXML
    private TextField tipPercentageField;

    @FXML
    private Label tipAmountLabel;

    @FXML
    private Label errorMessageLabel;

    @FXML
    private void calculateTip() {
        try {
            double billAmount = Double.parseDouble(billAmountField.getText());
            double tipPercentage = Double.parseDouble(tipPercentageField.getText());

            double tipAmount = billAmount * (tipPercentage / 100);
            tipAmountLabel.setText(String.format("Tip Amount: $%.2f", tipAmount));
            errorMessageLabel.setText("");
        } catch (NumberFormatException e) {
            errorMessageLabel.setText("Error: Invalid input. Please enter numbers.");
        }
    }

    @FXML
    private void reset() {
        billAmountField.clear();
        tipPercentageField.clear();
        tipAmountLabel.setText("");
        errorMessageLabel.setText("");
    }
}
```
